

B1 (cont.)
plurality of straps fixed to said top end of said head piece and to said top end of said frame, [and] a second plurality of straps adjustably fixed to said bottom end of said head piece and fixed to said bottom end of said frame[,] so that shortening said second plurality of straps pulls said head piece and causes said face seal to seal against ¹¹²(the face of a user), said second plurality of straps comprises a second pair of straps, said second pair of straps comprises a pair of buckles fixed to said bottom end of said head piece, a pair of strap portions fixed to said bottom end of said frame and adjustably received by said buckles, and ¹¹²(the ends) of said pair of strap portions remote from said bottom end of said frame being disposed adjacent ¹¹²(the base of the skull) of ¹¹²(said) user and extending generally forward and downwardly with respect to ¹¹²(the head of said user) when said strap portions are received respectively by said buckles.

Sub 47
B2
13 (Amended). In a face mask for use with a self contained breathing apparatus, said face mask comprising a frame having a top and a bottom, a transparent face plate within said frame, a face seal fixed to said frame and surrounding said face plate, a nose cup within said face seal and towards said bottom of said frame, and strap means for holding said face mask to ¹¹²(the face of a user), the improvement comprising a pair of eyeglasses within said face mask and supported adjacent to said nose piece, said eyeglasses comprising a pair of frames including a pair of lenses in said frames, a bridge fixed to said frames for holding said

B2
(cont.) frames with respect to each other, [a] an upwardly bent mounting member carried by said nose cup, [and] support arms fixed to said bridge and adjustably fixed to said mounting member, at least one rib on said nose cup, said rib defining a longitudinal hole therein, said mounting member including at least one arm slidably receivable within said longitudinal hole, a block carried by said support arms, and said block defining holes therethrough for slidably receiving said mounting member.

Add the following claims:

Sub C67
B3 20. In a face mask for use with a self contained breathing apparatus, said face mask comprising a frame having a top and a bottom, a transparent face plate within said frame, a face seal fixed to said frame and surrounding said face plate, a nose cup within said face seal and towards said bottom of said frame, and strap means for holding said face mask to ^{v12} (the face of a user) of the face mask, the improvement comprising said nose cup having a top end for engaging ^{v12} (the bridge of the nose of said user) and a bottom end for receiving ^{v12} (the chin of said user), and a portion of said bottom end being cutaway.

15
21. In a face mask as claimed in claim ¹⁴ 20, wherein said cutaway portion is V-shaped.

22. In a face mask as claimed in claim 21, wherein said V-shaped portion comprises a pair of edges and said edges being joined together.
